

# ETHERMA: WE STRIVE FOR NEW SOLUTIONS

*For more than 40 years, ETHERMA has been developing new, future-oriented and beautifully designed heating solutions at the highest level. In 2022, the Austrian company will present, among other things, the new premium infrared heater series ETHERMA EXO<sup>®</sup> as an absolute highlight.*

### **ETHERMA EXO<sup>®</sup> : The new premium infrared heater in industrial design**

The new premium infrared heater series ETHERMA EXO<sup>®</sup> combines all the advantages that ETHERMA has stood for four decades. The elegant and simple industrial design (in black or white) hits the pulse of the times. In terms of technology, the high-quality heaters have the latest features and technologies "Made in Austria". Above all, the series scores with individual models for a wide variety of applications. While the **ETHERMA EXO<sup>®</sup> DARK** premium infrared heater is perfect for protected outdoor areas such as pavilions or conservatories, the inexpensive entry-level model **ETHERMA EXO<sup>®</sup> BASIC** and the variants **ETHERMA EXO<sup>®</sup> PRO**, **ETHERMA EXO<sup>®</sup> COMFORT** and **ETHERMA EXO<sup>®</sup> STATIV** have been specially developed for outdoor use.

The premium infrared heater **ETHERMA EXO<sup>®</sup> PRO** impresses with its innovative premium carbon tube, which promises maximum heat output (thanks to 2,000 & 2,500 watts) with minimal residual light and has an above-average service life of 10,000 hours. Like the **ETHERMA EXO<sup>®</sup> DARK**, the device is optionally available with a three-stage wireless dimmer.

On the other hand, if you are looking for a compact solution, for example for mounting on umbrellas or awnings, you will be happy with the new comfort infrared heater **ETHERMA EXO<sup>®</sup> COMFORT**. The device, which weighs only 2.4 kilograms and is 54 centimeters tall, can be operated either by remote control or by means of an electric multifunction switch on the device. **ETHERMA EXO<sup>®</sup> STATIV**, the outdoor infrared heater with a base and two integrated heaters, is suitable for all those places where wall or ceiling mounting is not possible and you want to remain particularly flexible. Both **ETHERMA EXO<sup>®</sup> COMFORT** and **ETHERMA EXO<sup>®</sup> STATIV** have a practical timer and brief heating function.

### **ETHERMA DUO PLUS: the modern alternative to outdated night storage heaters**

Gone are the days of bulky night storage heaters - thanks to the frameless infinity design, the **ETHERMA DUO PLUS convector storage heater** saves space and is visually appealing at the same time. In terms of technology, the modern direct heater is impressive in three respects: the unique combination of convection, radiant heat and heat storage promises more performance with a significant optimization of operating costs.

### **ETHERMA e-FOIL: perforable heating foil for walls and ceilings**

Thanks to the extremely low installation height (0.4 mm) and the perforated fleece, the new **ETHERMA e-FOIL** heating foil can be plastered and filled on walls and ceilings with little effort. The biggest advantage: low voltage (24 volts) in combination with the special nature of the perforable heating foil make it easy to attach pictures or switches and thermostats to the heated walls. **ETHERMA e-FOIL is available** in two different sizes.

### **Flexible & uncomplicated**

The new, mobile infrared heater **LAVA<sup>®</sup> STAND** enables targeted zone heating and can be used flexibly thanks to the carrying handle and **can be easily controlled on the device** thanks to the integrated control.

## ETHERMA NEWS 2022.

---

### Progress in all areas of heating

Almost all ETHERMA product series and lines are constantly being expanded and rethought. In 2022, for example, the AQUA series will be expanded to include the hydraulically controlled instantaneous water heater **AQUA WHM** - perfect for selective use in washbasins. The **eTOUCH PRO** built-in switch thermostat (which can be found in the popular **eFLOOR DS PRO** and **eFLOOR LM PRO** floor sets, among other things) can be controlled via WLAN in the future and has the option of group switching as well as weekly and daily programming. The thermostat can be paired with the new **ETHERMA eTOUCH** (available in the Google Play Store and App Store).

You can find more information about the new products online at [www.etherma.com](http://www.etherma.com). Our experts will also be happy to personally answer your questions.
